Skills

Programming Languages

Python · Java · C

JavaScript · TypeScript · C#

SQL (PostgreSQL, Oracle) · HTML/CSS

Frameworks & Tools

Pandas · Scikit-Learn · PyTorch

Docker · Git · AWS · Linux · Hugging Face

Supabase · Vercel · Firebase

.NET · Node.js · Next.js · SpringBoot

Languages

Portuguese — Native
English — C1

Susana Loureiro

Professional Summary

Informatics Engineering student at ISEP (BSc, 2026) specializing in AI/ML and cloud architecture. AWS-certified in Machine Learning and Solutions Architecture with hands-on experience building intelligent recommendation systems and data-driven applications. Proficient in Python, ML frameworks, and cloud technologies.

Experience

ML Engineer Intern
DevScope
February 2026 — Present · Porto, Portugal (Hybrid)

- Developing a real-time computer vision system for automated people counting using YOLO-based object detection
- Building and training deep learning models with PyTorch to detect and track individuals across video streams
- *Technologies: Python, PyTorch, YOLO, Computer Vision*

Education

BSc in Informatics Engineering
ISEP - Instituto Superior de Engenharia do Porto
2022 — 2026

Certifications & Training

AWS Certified AI Practitioner — Foundational
Amazon Web Services
April 2025

AWS Certified Machine Learning Engineer — Associate
Amazon Web Services
June 2025

AWS Certified Solutions Architect — Associate
Amazon Web Services
August 2025

Projects

her. – Style Recommendation System

- Architected end-to-end recommendation pipeline with multi-stage data collection: user style profiling, contextual preferences (mood, time, occasion), and post-recommendation feedback analysis
- Designed relational database schema (PostgreSQL) with 8+ tables capturing user interactions, style vectors, and feedback metrics to drive recommendation refinement
- Built automated daily ETL workflows aggregating feedback data to identify style patterns and optimize recommendation accuracy over time
- Integrated Hugging Face ML models for style classification via REST API (TypeScript/Node.js), establishing feedback loop between user responses and model outputs
- *Technologies: TypeScript, Node.js, PostgreSQL, Supabase, Hugging Face API, Data Pipeline Architecture, ETL*

---

curate. – Conversational Outfit Recommender

- Trained a outfit compatibility model on the Polyvore dataset, framing garment pairing as a language modelling problem to generate contextually coherent outfit suggestions
- Built a conversational interface that takes a garment the user already owns as input and recommends complementary pieces, prioritising natural interaction over catalogue-style browsing
- Designed as a companion to her., extending the same conversational UX paradigm into the styling and outfit curation domain
- *Technologies: PyTorch, Hugging Face, Polyvore Dataset, Language Modelling*
